

Name of User & Position	Story
Coach for the Men's Club Soccer team Joey Wagner	I think it would be helpful to have something that helps us keep track of attendance and scheduled practices. It can be frustrating for us when we have one practice with 45 players and another with 8. Some way of incentivizing club members to participate would be extremely helpful for getting people to practice and knowing how many to expect at practices so that as a coach I can plan accordingly.
Math Club: President EdOrg, CEC: Treasurer NSTA: VP KDP, Pi Mu Epsilon: Member Jeremy Fortna	I want the site to showcase upcoming events for each of these clubs. For the Math Club specifically, I would like a feature to display our scheduled events so that members can stay updated. Additionally, I want the platform to promote all clubs to the broader campus community, helping each organization reach and engage more students. Let me know if more details or a different focus would be helpful!
Class of 2026 Class Club: VP Math Club: Social Media Manager EdOrg: Board Member CEC, KDP, eMotion, NSTA: Member Elizabeth Kutteh	I want a centralized website to help each of these organizations share news and promote upcoming events. Additionally, I would like a feature that allows visitors to send questions directly to clubs to improve engagement and provide accessible information. This will be especially helpful for the Class Club, as we have frequent fundraisers and events that we want to reach a wider audience beyond our social media followers.
Advisor of Computer Science Club Jessica Wang	I want a club website that features pages for event photos, project images, and demos, as well as a subscription option for our email list, so that members and prospective members can stay updated. I would also like a detailed club events schedule with information on topics and descriptions to help students know what to expect. Additionally, a question-answering feature, an event suggestion form, and options for voting and surveys would allow students to engage more actively. This platform would be especially helpful for new students interested in the club, providing them with easy access to information on events, locations, and joining the email list.
